

Manual Trolley Direction Band

Manual Trolley Direction Band for Aluminium Gantry Crane – single beam

Item No. 19515000

Manual Trolley Direction Band for Aluminium Gantry Crane – double beam

Item No. 195015000

Description

- The length of the Manual Trolley Direction Band is dependent on the height of the Aluminium Gantry Crane as well as the beam length.
- With integrated clamping device on both front ends of the aluminium beam (single beam) on the beam mounting as well as on the horizontal adjuster (double beam).
- The manual trolley direction band thus receives the necessary tonicity so the area beneath the park-brake trolley is free.
- Allows the user to move the trolley on the aluminium beam/aluminium double beams while remaining outside of the hazardous area. This makes work much easier for the user.
- With integrated clamping device on both ends of the band.
 - This component serves as weight sinker for the Manual Trolley Direction Band.

Hand Winch for Aluminium Gantry Cranes

Item No. 259150

Description

- for height adjustment. (without hanging load)
- 1 set = 2 pieces (one Hand Winch per lateral stand)
- incl. anti-turn secured wire rope, diameter 7 mm
- The Aluminium Gantry Crane can be assembled at a low level.
- Then the desired working height is adjusted by using the Hand Winches.
- The Hand Winch must be operated on both sides.

Technical Data

height of lift per winch
rotation 90 mm
weight 20 kg
